

HONGDA TCF HiKeyboard

Metal magnetic docking keyboard

Hi-Keyboard

Metal magnetic docking keyboard

Have fixed seats at the side of the docking port

The fixed seats come with the processing of electroplating technology. Though plugged and unplugged for many times it resembles the new unit. Shorter distance makes you put the keyboard to the tablet with little effort

Details are nowhere, operation is familiar and efficient

When your work needs recording or typing, a satisfactory keyboard is a good choice to improve efficiency. As the original rotating shaft keyboard for HiBook, Hi-keyboard has exquisite and considerate design. When using it, you will be familiar and efficient

[Modes display: Laptop mode, Bracket mode Folding mode, Protective cover mode]

Open and close between the angles of 0–120 degrees

Innovative 3mm pressure-responsive keyboard can respond the touch of fingers. The speed of typing is twice than the speed of onscreen touch panel typing. It 's smart enough, which can tell targeted typing from unintentional typing

Have the several pads on the keyboard

There are several pads on the keyboard to protect the tablet body from scratching when the tablet is in different modes

Quickness due to familiarity

The space between the keys in Hi-Keyboard is well-arranged. When putting your hand on the keyboard, you can find a sense of familiarity immediately, which speeds up typing

Smart and efficient

You could control the tablet with different fingers. As long as you move your finger, the tablet will be responsive and finish the instructions easily. Sliding upward and downward means that your two fingers move vertically. Window switching means three fingers slide leftwards. And desktop display means three fingers slide downward at the same time ... Maybe you never thought that your fingers could handle so much. There are another 2 standard USB ports in the keyboard, which makes you go outside for work more easily
